Playable Ads Portfolio

<https://dimayu2882.github.io/playables>

Languages

Russian -fluent

Ukrainian -C1

English - B1

Hard Skills

JavaScript, TypeScript

PixiJS

WebGL

GSAP

HTML 5

Vue 3

Vue Router

Pinia

SCSS

Vite

Webpack

Git

PHP

Figma, Photoshop

EDUCATION

Institute of Artificial Intelligence

AS Software | 2001–2003

ADDITIONAL INFORMATION

Hobbies: Philosophy, IT news, politics.

Objective: Teamwork on modern projects with the possibility professional growth.

Sharipzyanov Damir

Playable Ads Developer (Pixi JS) / HTML5 Game Developer

Frontend-разработчик (Vue.js)

ABOUT ME

Playable ads developer (HTML5 / PixiJS) with 7+ years of frontend experience. I specialize in creating HTML5 playable creatives with PixiJS (WebGL), optimizing performance, and reducing build sizes to meet ad network restrictions. I've implemented over 20 creatives with 0 bounce rates.

Moderation. I have experience designing client-side application architecture (Vue 3, Composition API, Pinia, Vite), developing reusable systems, and optimizing rendering. I understand the full development cycle: from design to production and support. I currently focus on creating scalable solutions for interactive advertising, including reusable modules and development acceleration tools. I have worked on product teams and understand the full development cycle.

EXPERIENCE

Playable Ads Developer (HTML5 / PixiJS)

reelance | March 2025 -Present Responsibilities

Responsibilities

- Developed over 20 HTML5 playable creatives (game mechanics, UI, animations) on PixiJS with build sizes ranging from 2.2 to 4.5 MB.
- Prepared creatives to meet the requirements of advertising networks (Google Ads, AppLovin, ironSource), ensuring Orejections during moderation.
- Optimized performance (FPS, draw calls, memory consumption) for stable operation on mobile devices.
- Reduced build size by compressing assets, using atlases, and minifying code. Adapted creatives to various screen resolutions and mobile devices.
- Developed areusable tutorial manager with the ability to expand and connect.
- Various game mechanics

Stack: HTML5, JavaScript (ES6+), CSS3, WebGL, PIXI JS, GSAP

Frontend-разработчик (Vue 3, TypeScript)

5AM (5AM.Capital) | Moscow (remote) | August 2023 - present Responsibilities

Responsibilities

- Lokeo Data SPA application development (Vue 3, TypeScript, Pinia).
- Creation of a reusable validation system and custom UI components.
- Performance optimization (rendering, working with state, reducing unnecessary re-renders).
- Backend integration (REST API), working with asynchronous data. Participation in the design of the application structure and reusable solutions.
- Concurrently, I migrated two corporate websites (100+ pages) from Bitrix to WordPress in a team of 2 people. I completed the migration without downtime and loss of service availability.
- I ensured compliance with modern standards: Core Web Vitals, responsiveness, SEO optimization.
- Achieved performance indicators in the "green zone" (PageSpeed, LCP, TTFB).
- I improved the efficiency of key business resources used as sources of product funding. Stack: Vue 3, Composition API, TypeScript, Pinia, Vue Router, Vite, SCSS

Stack: Vue 3, Composition API, TypeScript, Pinia, Vue Router, Vite, SCSS

Frontend-разработчик (project)

Triafly (project work) | Moscow (remote) | July 2022 - May 2023 Responsibilities

Responsibilities

- Development and support of BI platform modules: working with dynamic dashboards and interactive components
- Processing and displaying data from the backend (JSON), working with asynchronous requests
- Generating UI based on data using doT.js
- Visualizing analytical information via Apache ECharts (graphs, charts, tables)
- Optimizing rendering when working with large volumes of data
- Participating in the creation of a web portal for government agencies: teamwork, compliance with security requirements and accuracy of data output

Stack: HTML, CSS, JavaScript, doT.js, Apache ECharts

Frontend-разработчик (project)

Westwing.ru & Mebelrama.ru | Moscow | October 2021 – June 2022

Responsibilities

- Development and implementation of new interface modules for the e-commerce platform
- Work on redesigning the existing UI, taking into account adaptability and cross-browser compatibility
- Styling components using SCSS and implementing JS logic
- Participation in team development using the Kanban methodology
- CI/CD processes at JetBrains Space
- Redesign of the online store, adaptive layout

Stack: - HTML, SCSS, JavaScript, PHP (integration), Git, GitLab
